LOW CARBON - DOWO FLOW

MAXIMISING EFFICIENCY BY USING DOWO FLOW

Objectives

Low Carbon approached DOWO Digital to support their Asset Management & Maintenance team in improving their field data capture and streamlining their processes.

The team were looking for a solution that would provide combined business forms for multiple teams with additional forms tailored to the business needs, including:

- Standardise and streamline manual processes and forms into digital forms.
- Stop duplication and manual handling of data.
- Speed up the data flow to ensure risk is reduced.
- Solution that works offline with no connectivity.

BENEFITS

Cost Savings

Since using the app and the forms; the team have maximised efficiencies through saved time, administration and desktop activities, providing bottom line cost savings.

Quickly Scalable

The app can be deployed within seconds to new starters. Because the forms are easily adapted and changed they can also be published and deployed to all field users in seconds.

Improved Data Accuracy

Data accuracy has improved and enabled data capture & data flow through the organisation to reduce administration and ensure a higher level of reporting both internally and to clients.

Solutions

Low Carbon & DOWO Digital collaborated on the required forms and solution to develop a suite of forms and apps for their teams. This includes Health & Safety, Risk Assessments and company wide forms that are essential to their operational requirements.

Working closely with the team we created user based permissions to ensure field teams only see the forms and data they need.

Low Carbon maintain and manage multiple Solar Farms in often remote locations. DOWO Flow has supported them in GPS mapping their sites and for those difficult places with no signal; the offline capability has ensured no data is lost at any point.

"DOWO Flow has dramatically enhanced how we work as a team and business. We worked really well with the DOWO team to enable a solution that is tailored to our exact needs and we have even gone further than we expected due to the platforms its flexibility"
